Subject: RE: DEQ meeting Possum Point

I am okay with the additions for question 1. I don't think that we should include the change to the second question because it begs the question why not do that for all four. Since the question is about safety, let's stick to the original message. Cathy

Will this work?

1. How will the water from D Pond be filtered and released?

Once the final permit conditions are finalized, a waste water treatment system will be selected. The discharge will be routed through the treatment system prior to discharge. DEQ will develop limits for specific constituents that are associated with discharges. These limits are developed using conservative EPA and DEQ procedures that will ensure that the receiving stream and human health are protected. Monitoring of the discharges will occur to ensure that these limits are met.

In addition, to further ensure protection of the receiving stream, DEQ includes frequent testing of the discharges with fish and other aquatic life. These tests expose sensitive aquatic species to the discharge in order to confirm that there is no potential for impact to the receiving stream.

2. How can Dominion be a model for how this work can be done safely and efficiently?

While our entire plan for dewatering and closing the ponds is still being developed, we have committed to going beyond what is required in EPA's CCR rules by agreeing to remove the ash from four of the five ponds. In addition, we have benchmarked with other companies that are closing ash ponds and are applying best practices. Firms to complete the

work were evaluated and a firm selected based on experience and performance in conducting similar work. We have project oversight to ensure the project is completed in compliance, focusing on safety and according to the design.

When do you need a response?

Sent from my iPhone

On Nov 23, 2015, at 9:36 AM, Dan Genest (Services - 6) <dan.genest@dom.com> wrote:

The editor of an online publication attended the DEQ meeting last week on possum.

He had a few questions:

1. How will the water from D Pond be filtered and released?
2. How can Dominion be a model for how this work can be done safely and efficiently?

To whom should I talk to develop answers. Not sure we are really at a point where we want to discuss our plans in detail because I feel we are still considering our options.

Thanks

Chuck, I am working on a story about Possum Point. I have a lot of info from DEQ. I'd like to speak with Dominion about 2 things:

1. How will the water from D Pond be filtered and released?
2. How can Dominion be a model for how this work can be done safely and efficiently?

Thanks, and happy Monday.

U

Chuck, I went to a meeting at DEQ HQ in Woodbridge on Wednesday night about Possum Point permit. They told me Dom was notified. No one was from Dom was there. Do we know why?
